

DejaCode - What's in your software!

Open Source and Third-Party Software Component License Management

DejaCode™ is nexB's product for software component license management.

It helps companies control the risks of using open source and other third-party software components in products and systems. DejaCode tracks the origin and license information for your software components, including import of data from any software analysis tools that you use or from suppliers.

DejaCode also helps you meet customer requirements for software licensing compliance such as generated attribution text for open source components.

DejaCode Modules

Product Portfolio

Your own inventory of third-party software components within your product. Track and manage open-source, commercial and proprietary components.

License Library

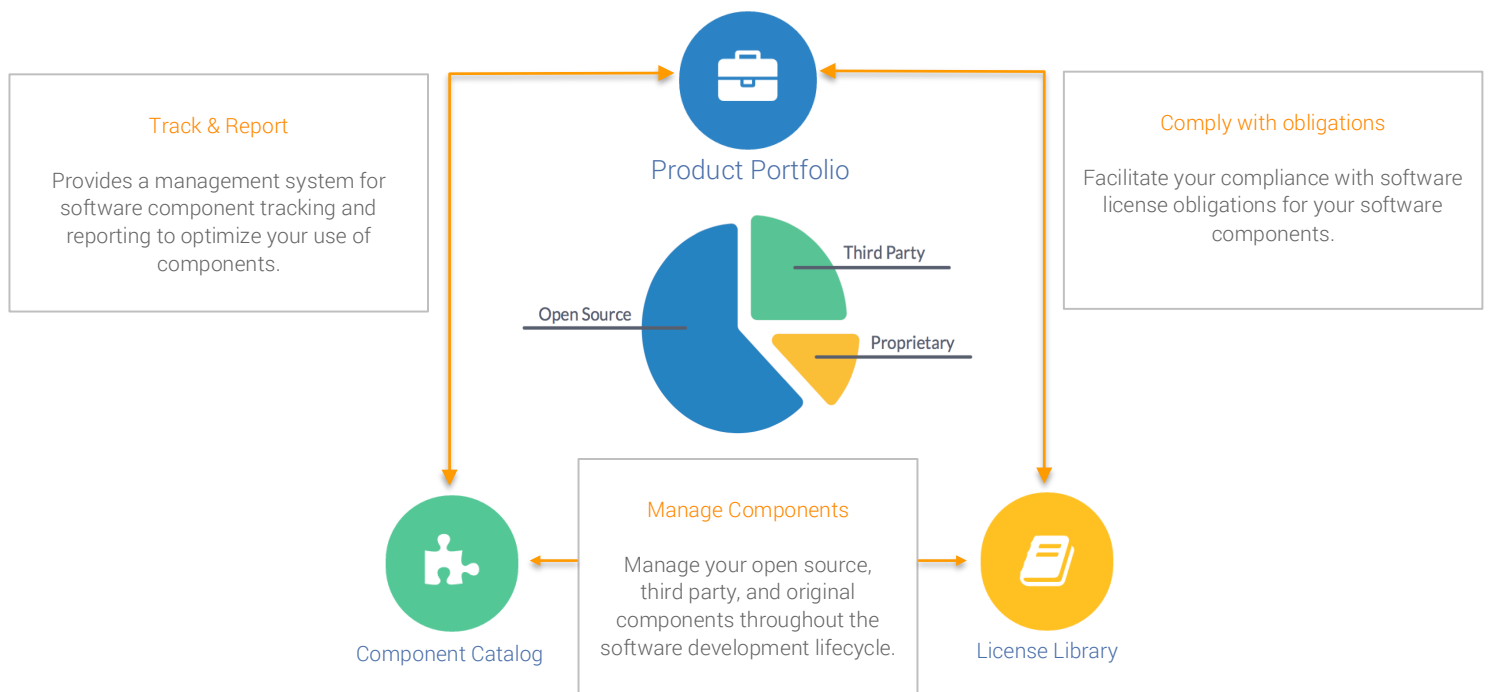

A library of open source and proprietary licenses with detailed documentation of license terms and conditions. Use the License Library to apply your own policies on software licenses.

Component Catalog

A catalog of public open source and proprietary software components with detailed metadata.

Governance & Guidance

Governance process set-up using modules available in DejaCode. Apply policies for software use and licensing across your organization.

DejaCode high-level architecture

DejaCode - What's in your software!

Benefits

Features
